Frontend Projects

React-based Library Application   CLICK HERE

- Built a React-based library application integrating external APIs for fetching real-time book data.
- Implemented functionality to fetch and display book details, including title, author, and description, along with a book cover image.
- Added a feature to download book PDFs directly from the app for seamless user experience.
- Ensured a responsive and user-friendly interface for browsing and accessing book details.
- Focused on API integration, error handling, and data management to deliver a reliable and efficient solution.
